## MONTHLY REVIEW OF SAN FRANCISCO DAIRY AND POULTRY MARKETS

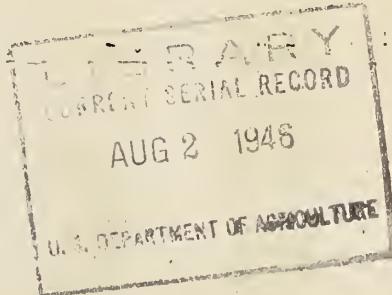

BUTTER: Supplies of butter moving thru regular wholesale channels into retail outlets during April were even smaller than those for the previous month, but with the steady increase in butter production from week to week receipts showed a definite upturn toward the end of the month. The "set-aside" order in effect during May and June requiring 20 percent of creamery butter production to be sold to the Government is expected to reduce supplies for civilians to practically the same volume as in 1945, since total production this year is 30 percent less than last, when the "set-aside" was 55 percent.

CHEESE: While supplies of cheese reaching retail outlets showed some increase, stocks of cheddar varieties continued far below normal. Distributors were hopeful that by June production would be sufficient to satisfy demand from all outlets, however, the new "set-aside" order requiring that 40 percent of cheddar cheese production be sold to Governmental agencies during May and June, caused opinion to change. Last year the "set-aside" during May was 65 percent, and June 70 percent, however, production this year is 15 percent less than in 1945.

EGGS: Eggs markets generally gained strength during the month with both spot and future sales reflecting a growing confidence in the outlook for Fall and Winter markets. Reports from hatcheries indicated a considerable reduction in the number of eggs being set, which has resulted in a larger number moving to wholesale markets. Surplus supplies of top quality eggs continued to move into storage in large numbers and total holdings in the 35 leading storage centers at the end of the month were 2 millions cases larger than a year ago.

POULTRY: Heavier marketings of leghorn fowl caused concern early in the month, and prices declined to a point where receivers were willing to store surplus receipts. An adjustment in feed allowances from a monthly basis to a seasonal basis enabled producers to keep layers on farms much longer and slowed down the number moving to market. Arrivals of fryers and roasters were light and insufficient for the demand. Dressed turkeys were firmer following improved demand. A very large percentage of breeder hen turkeys have been sold and storage toms are moving in larger volume. The general tone of the market held steady to firm.

## MONTHLY REVIEW OF LOS ANGELES DAIRY AND POULTRY MARKETS

BUTTER: An extremely firm market prevailed during the entire month. Supplies were still only a token of needs with distributor functions governed by current arrivals. Butter supplies at retail were somewhat larger than last month, but not through regular distributive channels. Increase was attributed chiefly to tie-in sales with other commodities, according to most reports. The close of April found no increase in supplies, although production was gaining, and a set-aside order of 20% was announced for month of May.

CHEESE: There was no appreciable change in the supply and strong demand during April. The persistent consumer demand quickly absorbed highly limited supplies of natural Cheddar and domestic Swiss. Other types were in relatively better supply, but still far from plentiful.

EGGS: Large and medium grade A were in active demand the entire month and tone held steady to firm at unchanged prices. Grade A small were accumulated in most quarters. Prices dropped 2¢ the first week and continued to decline each week, closing at 26-28¢, a drop of 6¢ during the month. With local storage holdings for all commodities at capacity levels of efficient operation, space for egg storage was limited. In many instances, space allotment near end of month was dependent on withdrawal of other commodities. Part of weakness of smalls was directly attributed to the tight storage situation. Small appeared steadier and heavier weights steady to firm at the close.

POULTRY: Young chickens were very firm and supplies were only a token of demand the entire month. The greater volume moved along more direct channels to consumers at price levels above terminal market competition. Most distributors were dependent on freezer stocks to supply regular outlets. With a Hebrew holiday and Easter near mid-point of April the demand for fowl, live and dressed, was quite active. Following Easter, the demand slackened and paying prices for leghorn fowl averaged somewhat lower. Early prices averaged 24-25¢ for leghorns 4 lbs. and up and closing prices were 23¢ fow 24-25¢. Broiler hen turkeys were in good demand and closed firmer. Wholesale prices ranged from 36-37¢ the first week to 39-40¢ at the close for grade A, boxed packed.
